

Test with *confidence*

IT certification exams are *expensive* and no one wants to take them twice, so how do you know if you're ready for test day?

You prepare, then test yourself to see if you are ready. Selecting the right practice test and using it efficiently can make *all the difference*.

Let's get started!

Buying a MeasureUp practice test is simple...

Many certification owners trust MeasureUp to develop content that tracks to exam goals.

- Cisco Approved practice test provider
- CompTIA Authorized practice test provider
- Microsoft Certified practice test provider
- VMware Official practice test provider
- SCP
- PMP partner

The practice test designed to pass the real exam includes:

- Questions mapped to certification exam objectives
- Remediation with detailed explanations and references
- Personalized practice and certification modes
- Detailed reporting identifies strengths and areas to improve
- Access via desktop or mobile devices

How do I prepare?

MeasureUp recommends following the exam prep guidelines:

1. Use Practice Mode to access questions, answers, explanations and reference materials.
2. Review your score report to identify knowledge areas that need additional focus.
3. Refine the Practice Mode experience by customizing domain objectives and/or selecting missed questions.
4. Determine exam readiness. After scoring several passing grades in Practice Mode, switch to Certification Mode — this is the closest experience to the exam. You are exam ready when you score 90%+ in Certification Mode *at least twice in a row!*
